PROFESSIONAL SUMMARY

Results-driven Backend Java Developer with 4.5+ years of experience in designing, developing, and supporting enterprise banking applications at Tata Consultancy Services. Experienced in building scalable backend services using Java, Spring Boot, Hibernate, and Microservices architecture, with strong exposure to REST and SOAP web services, Oracle databases, CI/CD pipeline implementation, and containerized deployments using Docker. Skilled in debugging production issues, enhancing transaction processing systems, and collaborating with cross-functional teams to deliver high-availability customer-facing banking platforms, with a strong passion for clean code practices, performance optimization, and building reliable distributed backend systems.

TECHNICAL SKILLS

Cloud Platform: AWS (EC2, S3, RDS, IAM, VPC, Auto Scaling, ALB, CloudWatch, CloudTrail)
DevOps Tools: Jenkins, GitHub Actions, Docker, Kubernetes, Terraform
Scripting: Python, Shell Scripting
Monitoring: CloudWatch, Grafana, Prometheus
Version Control: GitHub
Operating Systems: Linux, Windows
ITSM Tools: Jira, BMC Helix
Concepts: CI/CD, Infrastructure as Code, Containerization, Incident Management

EXPERIENCE

Tata Consultancy Services (TCS) **Bangalore | Nov 2021 – Present**
IT Analyst

- Provide L2 production support for AWS cloud-hosted applications, ensuring 99.9% system availability and business continuity
- Monitor infrastructure health, logs, and performance metrics using AWS CloudWatch, reducing incident response time by approximately 25%
- Develop and implement automation scripts using Shell/Python to minimize repetitive operational tasks, improving team efficiency by 20%
- Support CI/CD deployment validation and pipeline monitoring using Jenkins and GitHub, ensuring smooth release cycles with minimal deployment failures
- GitHub, ensuring smooth release cycles with minimal deployment failures
- Perform root cause analysis (RCA) for high priority incidents and implement preventive measures reducing recurring issues by 15%
- Collaborate with DevOps, development, and infrastructure teams to resolve performance bottlenecks and optimize system reliability

System Engineer

- Delivered global IT infrastructure and cloud application support for enterprise users across multiple regions, maintaining high SLA compliance
- Automated ticket routing and assignment workflows, improving resolution turnaround time by approximately 18%
- Assisted in environment configuration, application deployment readiness, and release coordination activities
- Supported troubleshooting of cloud service disruptions and performance issues during production deployments
- Contributed to operational process improvements that enhanced service delivery efficiency and user satisfaction
- Awarded “Best Team Member” recognition for proactive incident ownership and consistent performance delivery

Assistant System Engineer

- Assisted senior developers in debugging and fixing backend defects in enterprise banking applications
- Supported API testing and log monitoring activities during release cycles
- Gained hands-on experience in Git workflows, build processes and enterprise development standards
- Collaborated with QA team to ensure stable and defect-free code delivery

EDUCATION

Sri Venkateswara Institute of Technology, Andra Pradesh April 2021
Bachelor of Engineering, Computer Science and Engineering
